**Technological Slavery (Large Print 16pt)**

Theodore J. Kaczynski 2011-02 Theodore Kaczynski saw violent collapse as the only way to bring down the techno-industrial system, and in more than a decade of mail bomb terror he killed three people and injured 23 others. One does not need to support the actions that landed Kaczynski in supermax prison to see the value of his essays disabusing the notion of heroic technology while revealing the manner in which it is destroying the planet. For the first time, readers will have an uncensored personal account of his anti-technology philosophy, including a corrected version of the notorious "Unabomber Manifesto," Kaczynski's critique of anarcho-primitivism, and essays regarding "the Coming Revolution."

**Revealing the Invisible** Thomas Koulopoulos 2018-06-05 The world is at the precipice of a disruptive new era in which the ability to track every behavior will predict our individual and collective futures. Using artificial intelligence to analyze trillions of once-invisible data (behaviors) across vast digital ecosystems, companies and governments now have unimagined insight into our every behavior. Although making private behaviors “visible” may conjure a sense of 1984, the reality is that a new kind of value will emerge that has the power to radically alter the way we view some of the most basic tenets of business. Concepts such as brand loyalty will be turned on their heads as companies now have to find ways to prove their loyalty to each individual consumer. In addition,

the emergence of hyper-personalization and outcome-driven products may begin to solve some of the most pressing and protracted problems of our time. And it's not just human beings whose behaviors are being captured and analyzed. AI-powered autonomous vehicles, smart devices, and intelligent machines will all exhibit behaviors. In this very near future every person and digital device will have its own cyberself—a digital twin that knows more about us than we know about ourselves. Farfetched? Only if you discount the enormous power of these new technologies, which will use the invisible patterns in all of our behaviors to develop an intimate understanding of what drives us, where we see value, and how we want to experience the world. *Revealing the Invisible* shows businesses how to predict consumer behavior based on customers' prior tendencies, allowing a company to make better decisions regarding growth, products, and implementation.
